

ACCUPATH 10000: COMBINING ACUPUNCTURE DIAGNOSIS WITH HOMEOPATHIC TREATMENT

By F. Fuller Royal

Figure 1 - Instrument

"Vital Force," a term used by both the homeopathic and acupuncture schools of thought in defining the total energy of the body, provides a common meeting ground for the practitioners of the east and west. Ultramolecular Medicine incorporates a knowledge of the total electromagnetic energy of the body and, through the new Society of Ultramolecular Medicine (S.U.M.), 6125 West Tropicana, Las Vegas, Nevada 89103, 702/367-0260, offers the clinician a means of understanding the various complex parts making up "Vital Force". Acupuncture and homeopathic physicians recognize the difficulty in capturing such energy for scientific research and analysis, but both have recognized the laws governing "Vital Force" based upon centuries of empirical observation and reproducible results. Indeed, allopathic medicine today recognizes the benefits of electromagnetic energy fields when applied in some circumstances, accelerating the healing of fractures, for example.

Whether or not practitioners of the healing arts and sciences acknowledge the presence of electromagnetic energy fields is purely academic. Even though the entire scientific world and the Catholic Church opposed and persecuted Galileo in 1600, the truths about our universe and laws of motion governing it could not be altered. In truth, the earth does revolve around our sun. In truth, "Vital Force" does exist and is governed by laws. Tampering, disrupting, or altering any of the complex electromagnetic fields that make up "Vital Force" results in disorder, disharmony, and disease. It is not possible to regain good health without working in harmony with these laws. Some of these laws are:

1. All energy is derived directly or indirectly from a central source.

2. Everything that exists possesses and emits energy which produces an electromagnetic identity.
3. All living things consist of dynamic electromagnetic fields as a result of the energy they contain.
4. The complexity and direction of the flow of an energy field depends upon the amplitude and frequency of the sum total of energy oscillations.
5. The human body contains 14 major Channels of Energy Flow (CEF), 12 paired and 2 unpaired, as well as several minor CEF's.
6. The energy of the CEF's is measureable and reflects cellular and subcellular health or disease.

Success in the application of acupuncture and/or homeopathy depends upon the physicians's understanding of the laws governing "Vital Force."

Until recently, physicians have been unable to explain the mechanism involved in the healing effect of their particular practice. Today's physicist can explain the mechanism of action of both acupuncture and homeopathy. Medicines in homeopathy are often diluted beyond the existence of a single atom of the original substance. The unique energy field of a substance, the magnetic blueprint, maintains its identity in the absence of that substance in a material sense. Indeed, the less of the material substance present, the greater the intensity of the magnetic field and the greater or more profound is the effect upon the body. Thus, it is unlawful in France for a physician to prescribe homeopathic remedies in dilutions greater than 30c (10-60). Passage of such a law in the United States would appear ludicrous and unnecessary to medical and osteopathic physicians trained in traditional allopathic schools.

Energy medicine or Ultramolecular Medicine is now a reality. Many theories about illness and health will have to be re-examined in the light of new discoveries by the pioneers of electrodiagnosis. Japan's Yoshio Nakatani and Hiroshi Motoyama and Germany's F. Werner and Rheinhold Voll have been in the forefront of Ultramolecular Medicine with theories and practical applications of electrodiagnosis. These are the Galileos of medicine in today's world. These pioneers of medicine have built a bridge spanning the gap that once separated acupuncture and homeopathy. By using highly sophisticated and sensitive electronic equipment, we now can accurately measure changes occurring along CEF's in the body. A basic understanding of acupuncture is necessary. The

magnetic blueprints of homeopathic medications of varying intensities can be transported via an electrical current through the body's CEF's. Their effect, if any, can be accurately measured. An understanding of homeopathy makes the process of remedy selection much easier for the physician who is balancing an abnormal energy flow along a CEF.

Figure 2

The development of a computer type instrument, the Accupath 1000, has further simplified and expanded the physician's ability to quickly diagnose and select remedies that will restore an abnormal CEF to normal. This instrument, (figure 1) consists of a mono meg computer, a cathode ray tube and a screen (figure 2), a printer (figure 3), one "floppy" disc (figure 4), and a "potentizer" (figure 5). The Accupath 1000 has been designed to make the complex task of evaluating the CEF's as easy as possible for the physician.

Stored in the Accupath 1000 is software with 1700 remedies. An understanding of the Accupath 1000 is necessary to conduct patient testing. A unique method has been developed for identifying the magnetic fields of substances, converting them into the language of the computer, (Accupath 1000), and converting the computer language back into specific magnetic fields of those substances when called for. This remarkable instrument now makes it possible to evaluate the various CEF's and identifies the homeopathic remedies, along with the ideal potencies of those remedies, needed to restore a balance in the CEF's that are abnormal.

An electrical cord conducting approximately 5 volts of

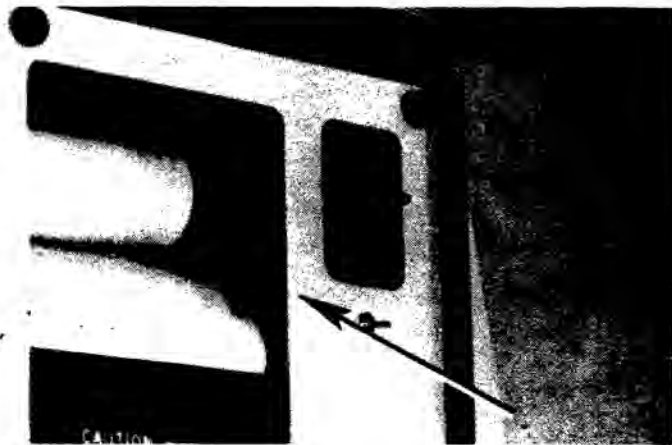

Figure 3 - Printer

electricity is connected to the Accupath 1000. The current is transmitted into the patient via a brass cylinder connected to the distal end of the wire. The brass cylinder is held in the hand during a patient evaluation. Another electrical wire conducts the current back to the instrument for measurement from the patient by a brass tipped stylus placed in contact with specific acupuncture points by the physician. The stylus or probe has been designed for easy and comfortable handling by the operator with a minimum of discomfort to the patient. The brass tip of the probe is applied at a 90 degree angle to the acupuncture point being measured, holding the finger or toe in such a way as to exert a constant, firm, contact between the stylus and the CEF measurement point.

A systematic testing to each of the control measurement points (CMP) of the various CEF's, utilizing the hands, fingers, feet and toes will provide valuable information about the physiological status of the patient's tissue and organ systems. Normal values range between 48 and 60 on the linear scale that registers on the screen of the Accupath 1000. Values which are above 60 signify inflammatory change (acute to chronic) in the body, whereas, readings below 48 indicate degenerative changes (cancer for example). An indicator drop (80 initial rise, dropping to 60) indicates inflammatory chan-

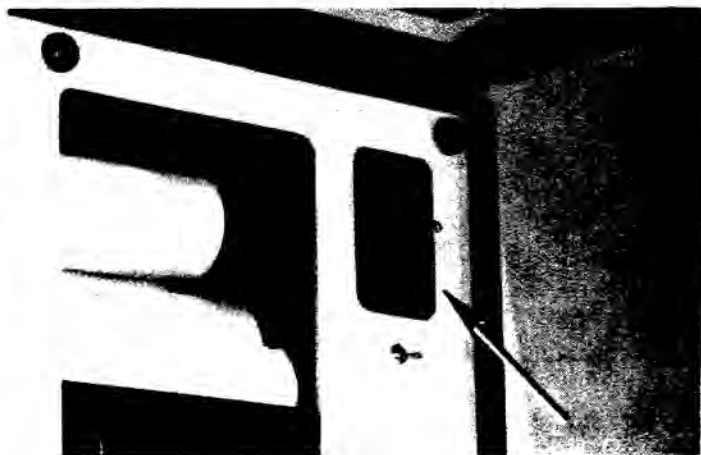

Figure 5 - Potentizer

ges associated with degeneration. Indicator drops are highly significant and identify systems or organs needing immediate attention and help.

As the CMP's are balanced with homeopathic remedies, the information is stored in the memory bank of the Accupath 1000. At the conclusion of the patient evaluation with the Accupath 1000, a printout can be obtained for placement in the patient's permanent record. Eventually dual discs are planned for use with this instrument. One of the discs will contain the full record of the patient (history, laboratory finding, treatment, etc.) and the second disc will contain the software program for the Accupath 1000. The ability to incorporate many different programs utilizing these discs offers an unlimited and exciting usage of the Accupath 1000, perhaps in ways we have not yet even considered.

Homeopathy and acupuncture have in common the balancing of "Vital Force" by working in harmony with the complex electromagnetic fields of the body through the application of needles (with or without electrical stimulation) and homeopathic remedies. Although electrodiagnostic techniques have been utilized for more than 25 years to measure the effect of an electrical current upon the CEF's, the invention of the Accupath 1000, with the ability to store and reproduce the electromagnetic blueprints of allopathic drugs, homeopathic remedies, nosodes, sarcodes, and allergens, and treatment modality that is simple, accurate and highly effective.

Many costly laboratory test procedures can often be eliminated by the use of this instrument. The Accupath 1000 measures the orderly flow of energy through the various CEF's to obtain information about the health of the body's organs and tissue systems. These medications or remedies which will aid the body in restoring a normal flow of energy in areas where imbalance and disease are present can be easily and quickly identified. Application of homeopathic re-

medies utilizing acupuncture evaluation of the patient results in a return to good health utilizing electromagnetic energy field that are safe and accurate, as well as being non-toxic, and non-invasive.
